DATE MAILED: 02/24/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

**Office Action Summary**

Application No.

09/967,048

Applicant(s)

KASAPI, ATHANASIOS A.

Examiner

Khai M. Nguyen

Art Unit

2687

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 07 December 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-15 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-15 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- ☒ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_
- ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_
- ☐ Notice of Informal Patent Application (PTO-152)
- ☐ Other: \_\_\_\_\_

## **DETAILED ACTION**

### ***Response to Amendment***

1. This Office Action is response to Amendment filed on 12/7/2005  
Claims 1-15 are pending.

### ***Response to Arguments***

2. Applicant's arguments with respect to claims 1-15 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-15 are rejected under 35 U.S.C. 102(e) as being anticipated by Boariu (U.S.Pat-6865237).

Regarding claim 1, Boariu teaches a method comprising:

receiving information for transmission to a receiver (fig.2b-3, col.11, line 65 to col.12, line 4, col.25, lines 18-32, *a signal 320 is transmitted by using three or more antennas, and received in the receiver 302*) ; and

generating a plurality of sub-carriers to redundantly transmit the information to a user over a multi-carrier wireless communication channel (fig.3, abstract, col.24, lines 32-62, col.28, lines 9-35, *the figure shows a situation where channel-code symbols are transmitted via three antennas at different frequencies at different time slots or using different spreading code*), wherein each of the sub-carriers is modified by a set of complex weights to ensure that each of the sub-carriers of the wireless communication channel propagates along a different physical path to the receiver (fig.3, abstract, col.24, lines 32-62, col.28, lines 9-35, *the figure shows a situation where channel-code symbols are transmitted via three antennas at different frequencies at different time slots or using different spreading code*).

Regarding claim 2, Boariu teaches a method according to claim 1, wherein each element of the set of complex weights scales one or more of a sub-carriers amplitude and/or phase at an associated transmission antenna (col.24, lines 32-62, col.34, lines 13-20).

Regarding claim 3, Boariu teaches a method according to claim 1, wherein developing a set of complex weights (col.12, lines 29-50) comprises:

choosing substantially different weights for each sub-carrier sharing information (col.12, lines 29-50); and

iteratively repeating until all sub-carriers have been modified (fig.2b, col.12, lines 29-50).

Regarding claim 4, Boariu teaches a method according to claim 3, wherein the substantially different weights are chosen to be orthogonal to the others (fig.2b, col.12, lines 29-50).

Regarding claim 5, Boariu teaches a method according to claim 3, wherein developing a set of complex weights (fig.2b, col.12, lines 29-50) comprises:

selecting weight vector(s) to be applied to each of the sub-carriers from a pre-determined set of weight vectors (fig.2b, col.9, lines 33-48, col.12, lines 29-50).

Regarding claim 6, Boariu teaches a method according to claim 1, further comprising:

transmitting the modified sub-carriers through one or more antenna(e) to the receiver (fig.2b-3, col.9, lines 33-48, col.12, lines 29-50).

Regarding claim 7, Boariu teaches a transceiver comprising:

a diversity agent (fig.2-3, col.12, lines 29-50), to selectively develop and apply a set of complex weight values to each of a plurality of signals (fig.2b-3, col.9, lines 33-48, col.12, lines 29-50, *transmitting the channel symbols via several different channels and two or more antennas*), each corresponding to a sub-carrier of a multi-carrier communication channel (fig.2b-3, col.9, lines 33-48, col.12, lines 29-50, *transmitting the channel symbols via several different channels and two or more antennas*), to introduce spatial diversity between such sub-carriers (col.9, line 61 to col.10, line 26); and

a transmit module (fig.3, element 300), coupled with the diversity agent (fig.2b-3), to receive the modified sub-carriers and transmit the signals to generate a multi-carrier communication channel with intra-channel spatial diversity (fig.3, abstract, col.24, lines 32-62, col.28, lines 9-35, *the figure shows a situation where channel-code symbols are transmitted via three antennas at different frequencies at different time slots or using different spreading code*).

Regarding claim 8, Boariu teaches a transceiver according to claim 7, wherein the plurality of signals received from at the diversity agent are baseband signals (col.5, lines 5-43).

Regarding claim 9, Boariu teaches a transceiver according to claim 7, wherein the multi-carrier communication channel is comprised of a plurality of sub-carrier signals (fig.2b-3, col.9, lines 33-48, col.12, lines 29-50, *transmitting the channel symbols via several different channels and two or more antennas*), each having a disparate set of complex weights introduced at a baseband of the sub-carriers to effect the spatial diversity between the sub-carriers (col.5, lines 5-43).

Regarding claim 10, Boariu teaches a transceiver according to claim 7, wherein each of the set of complex weights are comprised of a plurality of weight values each associated with one of a plurality of antennae comprising an antenna array through which the sub-carriers are transmitted (col.5, lines 5-43, col.9, lines 33-48, *transmitting the channel symbols via several different channels and two or more antennas*).

Regarding claim 11, Boariu teaches a transceiver according to claim 10, wherein the diversity agent develops the set of complex weight values for a given baseband signal to be maximally orthogonal complex weight values applied to another baseband signal (fig.3, col.5, lines 5-43, col.13, lines 11-14, col.25, lines 18-48).

Regarding claim 12, Boariu teaches a transceiver according to claim 10, wherein the diversity agent develops the set of complex weight vectors for a sub-carrier that are

substantially different from weight vectors modifying other sub-carriers that include at least a subset of information carried by the sub-carrier (fig.3, col.5, lines 5-43, col.13, lines 11-14, col.25, lines 18-48).

Regarding claim 13, Boariu teaches a transceiver according to claim 7, wherein the transmit module up converts and amplifies each of the modified baseband signals to generate a plurality of spatially diverse sub-carriers (fig.3, col.5, lines 5-43, col.13, lines 11-14, col.25, lines 18-48).

Regarding claim 14, Boariu teaches a transceiver according to claim 13, wherein the transmit module transmits each of the sub-carriers to one or more receiver(s) (fig.3, col.5, lines 5-43, col.13, lines 11-14, col.25, lines 18-48).

Regarding claim 15, Boariu teaches a transceiver according to claim 7, further comprising:

a memory having stored therein content (fig.3, col.25, lines 33-48); and control logic, coupled to the memory, to access and process at least a subset of the content to implement the diversity agent (fig.3, col.25, lines 18-48).

**Conclusion**

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Khai M. Nguyen whose telephone number is 571.272.7923. The examiner can normally be reached on 8:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, George En can be reached on 571.272.7495. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
